The World Health Organization affirms the use of sublingual allergy drops

SLIT [sublingual immunotherapy] is a safe treatment which significantly reduces symptoms and medication requirements in allergic rhinitis.

Do You Have Allergies?

AT LEAST ONE IN FIVE AMERICANS SUFFERS FROM ALLERGIES. HERE ARE SOME COMMON SYMPTOMS:

- Sneezing
- Watery or itchy eyes
- Runny or stuffed-up nose
- Chronic sinus and ear infections
- Asthma or chronic cough
- Recurrent colds or bronchitis
- Eczema and hives
- Muscle and joint pain
- Headaches
- Fatigue
- Gastrointestinal problems (food allergies)

Are allergies and asthma making you miserable? Allergy drops offer a simple solution.

Pills, nasal sprays and inhalers may take the edge off of your allergy symptoms, but they don't address the source of the allergy. Stop the medications and the symptoms return! For lasting results, you need immunotherapy—the only treatment proven to change the underlying allergic disease.

How do sublingual (under-the-tongue) allergy drops work?
Like allergy shots, drops contain extracts of common allergens. When placed under the tongue, the drops are absorbed into the bloodstream, gradually desensitizing the body to the allergens so that it will stop overreacting to the environment in ways that lead to troubling symptoms.

How long until I feel better?
Because sublingual drops can be dosed more frequently than shots, the vast majority of AllergyEasy® patients experience marked symptom relief within the first few months of starting treatment, and some feel better in just a few weeks.

Are allergy drops safe?
Sublingual allergy drops contain the same all-natural antigens found in shots. However, because drops have not been associated with the same degree of risk for anaphylactic reaction as shots, they are safe enough to be taken at home.

Does the program work well for children?
Since AllergyEasy® drops are pain-free and easy to administer, they are an attractive choice for children. In addition, unlike shots, drops have been shown to be safe for children under age five.

Will AllergyEasy® drops work in other parts of the country?
Yes. While many allergy programs only treat for a small selection of local pollens, AllergyEasy® serum contains most common pollens from around the world. Slip your vial of allergy drops into your travel bag and venture out with thorough allergy protection.

When were sublingual allergy drops developed?
Sublingual immunotherapy was developed over 60 years ago. It is widely used throughout the world and is especially popular in Europe where it accounts for more than 45 percent of allergy treatment.

Spring is usually the worst season for us — the nebulizer goes non-stop. After starting on the [AllergyEasy®] serum, I can count on one hand the number of times I had to use it. I had no idea that something this simple could completely change my child’s life!

—Robin B. (mother of child asthma patient)

Why choose the AllergyEasy® program?
• Take painless under-the-tongue drops in the comfort of home
• Avoid frequent trips to the physician’s office for allergy shots
• Lasting results — not just a “band-aid” fix
• For children to seniors — safer and less age-restrictive than shots
• Comprehensive serum protects against most allergens worldwide — not just a few local ones
• Contains the same all-natural antigens found in allergy shots
• No painful, drawn-out allergy testing — short and sweet!
• For food allergies, too

Getting Started is as Easy as 1-2-3!
1 Consult with your doctor and get a brief allergy test
2 Once approved for treatment, you will receive your allergy serum
3 Take serum daily as under-the-tongue drops for relief
