

From *AllergyEasy*[®] Patients:

I had allergies to onion, garlic and spices. After about a month on the drops, I began seeing a decrease in the severe headaches and gastrointestinal upset. **For the first time in 20 years, I don't have to actively avoid spicy foods.**

— Brent S., M.D.

My daughter had many food allergies including wheat, dairy and some vegetables. She had eczema, sinusitis and congestion that caused her to cough all through the night. **The allergy drops changed her life.** I now have a happy 4-year-old who can eat any wheat product, cheese, ice cream, pizza... all of those normal kid things.

— Danielle C.

I had horrible intestinal problems for 15 years. Doctors kept telling me I was fine. **When I started on the food drops, I noticed improvement within the first week or two.**

My intestinal problems are significantly improved, my fatigue is gone, my energy level is through the roof and my rash is much better.

— Cliff H.

Do I Have Food Allergies?

COMMON SYMPTOMS MAY INCLUDE:

Itching in the mouth

*Swelling of the lips,
palate and throat*

*(leading to difficulty
swallowing and breathing)*

Gastrointestinal problems

*such as gas, cramping,
frequent diarrhea, etc.*

Skin problems

such as eczema and hives

Asthma

Interstitial Cystitis

"painful bladder syndrome"

Eosinophilic Esophagitis (EoE)

If you experience any of these symptoms,
contact your *AllergyEasy*[®] provider today.

Finally, an Easy Treatment for **FOOD ALLERGIES!**

Just a few drops under the tongue

If you have food allergies, you have probably been told to simply avoid reaction-causing foods. Now there's a better way. Squeeze a few liquid drops under your tongue each day, and reprogram your body to start tolerating more foods.

Treatment starts with a serum containing extracts of many allergy-causing foods. The serum is taken daily as under-the-tongue droplets that absorb into the bloodstream through special cells in the mouth (a treatment known as sublingual immunotherapy*). Over time, the body can become desensitized to these foods, minimizing allergic reactions.

*Immunotherapy is the only treatment proven to alter the underlying allergic disease instead of just its symptoms.

What foods can be treated for?

The **AllergyEasy**® program can treat for 59 different food items including milk, eggs, wheat, rice, soy and a variety of fruits and vegetables.

Are there side effects or risks?

Because the drops contain naturally-occurring particles, side effects are minimal. And due to the high safety profile of the drops¹, they can be taken at home rather than at the doctor's office.

At what age can I start treatment?

Children under 5 years of age have been safely treated using sublingual immunotherapy.²

How long until I see results?

The majority of **AllergyEasy**® patients achieve relief from food allergy symptoms in three to six months or less and can then continue on maintenance drops. Each patient is unique, and your results may vary.

How did this treatment come about?

Sublingual immunotherapy (SLIT) has been used worldwide for decades to treat pollen allergies. Recent studies, including high-profile trials at Duke University, have shown SLIT to be a safe and effective treatment for food allergies as well.³

Why choose the AllergyEasy® program?

- *Markedly reduces the chance of allergic reactions to dozens of foods*
- *Easy, under-the-tongue administration*
- *High safety profile—minimal risk of side effects (all-natural antigens)*
- *For children to seniors (sublingual allergy drops have been shown to be safe for children under 5)*

Getting Started is as Easy as 1-2-3!

- 1 Consult with your doctor and get a brief allergy test*
- 2 Receive a bottle of allergy serum*
- 3 Take serum daily as under-the-tongue drops for relief*
